Light Gauge / Thin Wall Damage Waiver

Vision Pickling & Processing and QC Metal Pickling will only accept orders to pickle and oil sheet of less than 16 gauge and tube less than .065 wall on a best effort basis. These products are extremely susceptible to handling and traffic damage. Customers using Vision or QC to process this material agree to hold both companies blameless for any damage to material (dings, dents, bends, etc.) that may occur within our facilities. Although we have had some success processing this material, the replacement cost far exceeds the price we charge.

Orders to Vision and QC to process less than 16-gauge sheet or less than .065 wall tube must have management approval with a signed waiver on file. Vision and QC must also be notified prior to arrival of material (Date, Carrier, etc.) so that appropriate actions can be taken when unloading material.

By signing below, you acknowledge this inherent risk and agree to waive any damage claims to material.
